Ultrasonography

Calcaneus ultrasound

ID	Term	Description	Type	Variable IDs

ID	Term	Description	Type	Variable IDs
PDE077057947.1	% Age Matched	% Age Matched represents the intensity index value of an individual as a percentage of the expected value of a reference group of the same age and gender.	N	PDV077057947.1_00100
PDE077057948.1	% Young Adult	"% Young Adult" is represented as the average percentage of females aged between 20 and 35 to indicate the strength index value of individuals.	N	PDV077057948.1_00100
PDE077057949.1	Bone stiffness index	Bone stiffness index	N	PDV077057949.1_00100
PDE077057950.1	Broadband ultrasound attenuation	The measurement of broadband ultrasound attenuation (BUA) includes sending a broadband ultrasonic pulse to the test bone and measuring the decrease of its intensity at different frequencies. Send a voltage spike pulse to the transducer to generate a broadband sound wave. This broad spectrum allows measurement of attenuation occurring in a frequency range.	N	PDV077057950.1_00100
PDE077057951.1	Calcaneus	Used to record whether to choose left foot or right foot for instrument measurement.	S1	PDV077057951.1_00100
PDE077057952.1	Speed of sound	The measurement of calcaneal sound velocity involves the accurate measurement of sound wave propagation time through the heel. This can be compared with the time required for sound waves to pass through a water bath. The transmission time is the time from the start of transmitting pulse to the start of receiving pulse.	N	PDV077057952.1_00100
PDE077057953.1	T score	The T score is used to indicate that the personal intensity index is higher or lower than the average reference value of the reference "% Young Adult", which is expressed as a standard deviation (SD).	N	PDV077057953.1_00100
PDE077057954.1	Z score	Z score is used to indicate that the personal intensity index is higher or lower than the expected age matching value, which is expressed by the standard deviation of the relative intra-group deviation.	N	PDV077057954.1_00100

Ultrasonography

Ultrasonic detector-cardiovascular

ID	Term	Description	Type	Variable IDs
PDE079058154.1	Anteroposterior diameter of left atrium	The measurement of the distance from the front (anterior) to the back (posterior) of the left atrium.	N	PDV079058154.1_00100
PDE079058155.1	Aortic valve velocity	The maximum speed at which the blood flows through the aorta during the cardiac cycle, expressed as distance per unit of time.	N	PDV079058155.1_00100
PDE079058156.1	Diameter of aortasinus	The measurement of the diameter of aortasinus.	N	PDV079058156.1_00100
PDE079058157.1	E peak deceleration time, mitral valve blood flow	The time interval from the peak of the transmitral Doppler early filling velocity to the intersection with the Doppler baseline derived from the slope of the transmitral early filling wave.	N	PDV079058157.1_00100
PDE079058158.1	E peak deceleration time, tricuspid valve blood flow	E peak deceleration time, tricuspid valve blood flow	N	PDV079058158.1_00100
PDE079058159.1	Ejection fraction of left ventricle	Ejection fraction of left ventricle	N	PDV079058159.1_00100
PDE079058160.1	End-diastolic diameter of left ventricle	The measurement of the diameter of the left ventricle at the end of diastole.	N	PDV079058160.1_00100
PDE079058161.1	End-diastolic volume of left ventricle	Volume of the blood contained in a given chamber at end diastole, usually provided	N	PDV079058161.1_00100

ID	Term	Description	Type	Variable IDs
PDE079058162.1	End-systolic diameter of left ventricle	The measurement of the diameter of the left ventricle at the end of systole.	N	PDV079058162.1_00100
PDE079058163.1	End-systolic volume of left ventricle	Volume of the blood contained in a given chamber at end systole, usually provided in	N	PDV079058163.1_00100
PDE079058164.1	Fractional shortening of left ventricle	A calculated measurement corresponding to the ratio or percent reduction in left ventricular diameter between end-diastole and end-systole.	N	PDV079058164.1_00100
PDE079058165.1	Left-right diameter of the left atrium	The measurement of the distance from the left side to the right side of the left atrium.	N	PDV079058165.1_00100
PDE079058166.1	Left-right diameter of the right atrium	The measurement of the distance from the left side to the right side of the right	N	PDV079058166.1_00100
PDE079058167.1	Peak value of a'-wave, mitral valve (septal) annular tissue	Peak value of a'-wave, mitral valve (septal) annular tissue	N	PDV079058167.1_00100
PDE079058168.1	Peak value of a'-wave, mitral valve (side wall) annular tissue	Peak value of a'-wave, mitral valve (side wall) annular tissue	N	PDV079058168.1_00100
PDE079058169.1	Peak value of a-wave, mitral valve blood	Peak value of a-wave, mitral valve blood flow	N	PDV079058169.1_00100
PDE079058170.1	Peak value of a'-wave, tricuspid valve annulus tissue	Peak value of a'-wave, tricuspid valve annulus tissue	N	PDV079058170.1_00100
PDE079058171.1	Peak value of a-wave, tricuspid valve blood flow	Peak value of a-wave, tricuspid valve blood flow	N	PDV079058171.1_00100
PDE079058172.1	Peak value of e'-wave, mitral valve (septal) annular tissue	Peak value of e'-wave, mitral valve (septal) annular tissue	N	PDV079058172.1_00100
PDE079058173.1	Peak value of e'-wave, mitral valve (side wall) annular tissue	Peak value of e'-wave, mitral valve (side wall) annular tissue	N	PDV079058173.1_00100
PDE079058174.1	Peak value of e-wave, mitral valve blood	Peak value of e-wave, mitral valve blood flow	N	PDV079058174.1_00100
PDE079058175.1	Peak value of e'-wave, tricuspid valve annulus tissue	Peak value of e'-wave, tricuspid valve annulus tissue	N	PDV079058175.1_00100
PDE079058176.1	Peak value of e-wave, tricuspid valve blood flow	Peak value of e-wave, tricuspid valve blood flow	N	PDV079058176.1_00100
PDE079058177.1	Peak value of s-wave, mitral valve (septal) annular tissue	Peak value of s-wave, mitral valve (septal) annular tissue	N	PDV079058177.1_00100
PDE079058178.1	Peak value of s-wave, mitral valve (side wall) annular tissue	Peak value of s-wave, mitral valve (side wall) annular tissue	N	PDV079058178.1_00100
PDE079058179.1	Peak value of s-wave, tricuspid valve annulus tissue	Peak value of s-wave, tricuspid valve annulus tissue	N	PDV079058179.1_00100
PDE079058180.1	Posterior wall thickness of left ventricle	The measurement of the thickness of the posterior wall of the left ventricle.	N	PDV079058180.1_00100
PDE079058181.1	Pulmonary artery systolic blood pressure	The blood pressure in the pulmonary artery during the contraction of the left ventricle of the heart.	N	PDV079058181.1_00100
PDE079058182.1	Pulmonary valve velocity	Pulmonary valve velocity	N	PDV079058182.1_00100

ID	Term	Description	Type	Variable IDs
PDE079058183.1	Right ventriclar fractional area change (FAC-D)	The	N	PDV079058183.1_00100
PDE079058184.1	Right ventricular basal segment inner diameter	The measurement of the inner diameter of the basal segment (the lower part) of the right ventricle.	N	PDV079058184.1_00100
PDE079058185.1	Right ventricular fractional area change (FAC-S)	Right ventricular fractional area change (FAC-S)	N	PDV079058185.1_00100
PDE079058186.1	Septal thickness of left ventricle	The measurement of the thickness of the septum, which is the muscular wall that separates the left and right ventricles of the heart. Specifically, it represents the thickness of the septum in the left ventricle.	N	PDV079058186.1_00100
PDE079058187.1	Supero-inferior diameter of the left atrium	The measurement of the distance from the top (superior) to the bottom (inferior) of the left atrium.	N	PDV079058187.1_00100
PDE079058188.1	Supero-inferior diameter of the right atrium	The measurement of the distance from the top (superior) to the bottom (inferior) of the right atrium.	N	PDV079058188.1_00100
PDE079058189.1	Supero-inferior diameter of the right ventricle	The measurement of the distance from the top (superior) to the bottom (inferior) of the right ventricle.	N	PDV079058189.1_00100
PDE079058190.1	Tricuspid annular plane systolic excursion, right ventricle	Right ventricular function was determined by using tricuspid annular plane systolic excursion (TAPSE) which has been described as an accurate method for evaluation of right ventricular function.	N	PDV079058190.1_00100

Vocal

Electronic laryngoscope system

ID	Term	Description	Type	Variable IDs
PDE080058191.1	25th percentile values of Jitter using Teager-Kaiser energy operator (TKEO)	25th percentile values of Jitter using Teager-Kaiser energy operator (TKEO). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058191.1_00100
PDE080058192.1	25th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO)	25th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058192.1_00100
PDE080058193.1	5th percentile values of Jitter using Teager-Kaiser energy operator (TKEO)	5th percentile values of Jitter using Teager-Kaiser energy operator (TKEO). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058193.1_00100
PDE080058194.1	5th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO)	5th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058194.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058195.1	75th percentile values of Jitter using Teager-Kaiser energy operator (TKEO)	75th percentile values of Jitter using Teager-Kaiser energy operator (TKEO). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058195.1_00100
PDE080058196.1	75th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO)	75th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058196.1_00100
PDE080058197.1	95th percentile values of Jitter using Teager-Kaiser energy operator (TKEO)	95th percentile values of Jitter using Teager-Kaiser energy operator (TKEO). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058197.1_00100
PDE080058198.1	95th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO)	95th percentile values of Shimmer using Teager-Kaiser energy operator (TKEO). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058198.1_00100
PDE080058199.1	Coefficient of variation of Jitter	Coefficient of variation of Jitter. Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental	N	PDV080058199.1_00100
PDE080058200.1	Coefficient of variation of Shimmer	Coefficient of variation of Shimmer. Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in	N	PDV080058200.1_00100
PDE080058201.1	Detrended Fluctuation value	Detrended Fluctuation value	N	PDV080058201.1_00100
PDE080058202.1	Duration of the silence segments	The duration without human voice.	N	PDV080058202.1_00100

MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058226.1_00100
PDE080058227.1	Mean of 10th delta coefficient of MFCC	Mean of 10th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058227.1_00100
PDE080058228.1	Mean of 10th delta-delta coefficient of MFCC	Mean of 10th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058228.1_00100
PDE080058229.1	Mean of 11th coefficient of MFCC	Mean of 11th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058229.1_00100
PDE080058230.1	Mean of 11th delta coefficient of MFCC	Mean of 11th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058230.1_00100
PDE080058231.1	Mean of 11th delta-delta coefficient of MFCC	Mean of 11th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058231.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058232.1	Mean of 12th coefficient of MFCC	Mean of 12th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058232.1_00100
PDE080058233.1	Mean of 12th delta coefficient of MFCC	Mean of 12th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058233.1_00100
PDE080058234.1	Mean of 12th delta-delta coefficient of MFCC	Mean of 12th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058234.1_00100
PDE080058235.1	Mean of 1st coefficient of MFCC	Mean of 1st coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058235.1_00100
PDE080058236.1	Mean of 1st delta coefficient of MFCC	Mean of 1st delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058236.1_00100
PDE080058237.1	Mean of 1st delta-delta coefficient of MFCC	Mean of 1st delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058237.1_00100
PDE080058238.1	Mean of 2nd coefficient of MFCC	Mean of 2nd coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058238.1_00100
PDE080058239.1	Mean of 2nd delta coefficient of MFCC	Mean of 2nd delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058239.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058240.1	Mean of 2nd delta-delta coefficient of MFCC	Mean of 2nd delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058240.1_00100
PDE080058241.1	Mean of 3rd coefficient of MFCC	Mean of 3rd coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058241.1_00100
PDE080058242.1	Mean of 3rd delta coefficient of MFCC	Mean of 3rd delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058242.1_00100
PDE080058243.1	Mean of 3rd delta-delta coefficient of MFCC	Mean of 3rd delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058243.1_00100
PDE080058244.1	Mean of 4th coefficient of MFCC	Mean of 4th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058244.1_00100
PDE080058245.1	Mean of 4th delta coefficient of MFCC	Mean of 4th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058245.1_00100
PDE080058246.1	Mean of 4th delta-delta coefficient of MFCC	Mean of 4th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058246.1_00100
PDE080058247.1	Mean of 5th coefficient of MFCC	Mean of 5th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058247.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058248.1	Mean of 5th delta coefficient of MFCC	Mean of 5th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058248.1_00100
PDE080058249.1	Mean of 5th delta-delta coefficient of MFCC	Mean of 5th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058249.1_00100
PDE080058250.1	Mean of 6th coefficient of MFCC	Mean of 6th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058250.1_00100
PDE080058251.1	Mean of 6th delta coefficient of MFCC	Mean of 6th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058251.1_00100
PDE080058252.1	Mean of 6th delta-delta coefficient of MFCC	Mean of 6th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058252.1_00100
PDE080058253.1	Mean of 7th coefficient of MFCC	Mean of 7th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058253.1_00100
PDE080058254.1	Mean of 7th delta coefficient of MFCC	Mean of 7th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058254.1_00100
PDE080058255.1	Mean of 7th delta-delta coefficient of MFCC	Mean of 7th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058255.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058256.1	Mean of 8th coefficient of MFCC	Mean of 8th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058256.1_00100
PDE080058257.1	Mean of 8th delta coefficient of MFCC	Mean of 8th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058257.1_00100
PDE080058258.1	Mean of 8th delta-delta coefficient of MFCC	Mean of 8th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058258.1_00100
PDE080058259.1	Mean of 9th coefficient of MFCC	Mean of 9th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058259.1_00100
PDE080058260.1	Mean of 9th delta coefficient of MFCC	Mean of 9th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058260.1_00100
PDE080058261.1	Mean of 9th delta-delta coefficient of MFCC	Mean of 9th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the	N	PDV080058261.1_00100
PDE080058262.1	Mean of delta log signal energy	Mean of delta log signal energy	N	PDV080058262.1_00100
PDE080058263.1	Mean of delta-delta log signal energy	Mean of delta-delta log signal energy	N	PDV080058263.1_00100
PDE080058264.1	Mean of energy values	Mean of energy values	N	PDV080058264.1_00100
PDE080058265.1	Mean of glottal to noise excitation ratio	Mean of glottal to noise excitation ratio. The Glottal-to-Noise Excitation Ratio (GNE) belongs to a family of measures that aim to quantify the extent of noise in the signal (they can be viewed as SNR-like measures).	N	PDV080058265.1_00100
PDE080058266.1	Mean of Harmonics to Noise Ratio	Mean of Harmonics to Noise Ratio. HNR quantify the ratio of actual signal information over noise.	N	PDV080058266.1_00100
PDE080058267.1	Mean of Jitter	Mean of Jitter. Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058267.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058268.1	Mean of Jitter in decibels	Mean of Jitter in decibels. Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058268.1_00100
PDE080058269.1	Mean of Jitter using frequency modulation	Mean of Jitter using frequency modulation. Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in	N	PDV080058269.1_00100
PDE080058270.1	Mean of Jitter using Teager-Kaiser energy operator (TKEO)	Mean of Jitter using Teager-Kaiser energy operator (TKEO). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058270.1_00100
PDE080058271.1	Mean of log signal energy	Mean of log signal energy	N	PDV080058271.1_00100
PDE080058272.1	Mean of Noise to Harmonics Ratio	Mean of Noise to Harmonics Ratio. NHR quantify the ratio of actual signal information over noise.	N	PDV080058272.1_00100
PDE080058273.1	Mean of pitch values	Mean of pitch values. Pitch values is an intrinsic property of a periodic signal and serves as a quantized representation of the perceived pitch. For human speech, observed typically range from 60Hz to 300Hz.	N	PDV080058273.1_00100
PDE080058274.1	Mean of Shimmer	Mean of Shimmer. Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058274.1_00100
PDE080058275.1	Mean of Shimmer in decibels	Mean of Shimmer in decibels. Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058275.1_00100
PDE080058276.1	Mean of Shimmer using frequency modulation	Mean of Shimmer using frequency modulation. Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in	N	PDV080058276.1_00100
PDE080058277.1	Mean of Shimmer using Teager-Kaiser energy operator (TKEO)	Mean of Shimmer using Teager-Kaiser energy operator (TKEO). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058277.1_00100
PDE080058278.1	Mean of the 1st formant	Mean of the 1st formant	N	PDV080058278.1_00100
PDE080058279.1	Mean of the 2nd formant	Mean of the 2nd formant	N	PDV080058279.1_00100
PDE080058280.1	Mean of the 3rd formant	Mean of the 3rd formant	N	PDV080058280.1_00100
PDE080058281.1	Mean of vocal fold excitation ratios (VFER)	Mean of vocal fold excitation ratios (VFER). The Vocal Fold Excitation Ratios (VFER) are another family of dysphonia measures with similar conceptual justification to GNE: glottal cycles lead to synchronous excitation of different frequency bands and turbulent noise leads to uncorrelated excitation.	N	PDV080058281.1_00100
PDE080058282.1	Mean of 0th order perturbation of Jitter	Mean of zeroth order perturbation of Jitter. Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in	N	PDV080058282.1_00100
PDE080058283.1	Mean of 0th order perturbation of Shimmer	Mean of zeroth order perturbation of Shimmer. Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in	N	PDV080058283.1_00100
PDE080058284.1	Median of energy values	Median of energy values	N	PDV080058284.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058285.1	Median of pitch values	Median of pitch values. Pitch values is an intrinsic property of a periodic signal and serves as a quantized representation of the perceived pitch. For human speech, observed typically range from 60Hz to 300Hz.	N	PDV080058285.1_00100
PDE080058286.1	Minimum energy values	Minimum energy values	N	PDV080058286.1_00100
PDE080058287.1	Minimum of the 1st formant	Minimum of the 1st formant	N	PDV080058287.1_00100
PDE080058288.1	Minimum of the 2nd formant	Minimum of the 2nd formant	N	PDV080058288.1_00100
PDE080058289.1	Minimum of the 3rd formant	Minimum of the 3rd formant	N	PDV080058289.1_00100
PDE080058290.1	Minimum pitch values	Minimum pitch values. Pitch values is an intrinsic property of a periodic signal and serves as a quantized representation of the perceived pitch. For human speech, observed typically range from 60Hz to 300Hz.	N	PDV080058290.1_00100
PDE080058291.1	Percent of Jitter	Percent of Jitter. Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058291.1_00100
PDE080058292.1	Percent of Shimmer	Percent of Shimmer. Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058292.1_00100
PDE080058293.1	Perturbation quotient measures of Jitter using 11 cycles (Baken method)	Perturbation quotient measures of Jitter using 11 cycles (Baken method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058293.1_00100
PDE080058294.1	Perturbation quotient measures of Jitter using 11 cycles (Generilized Schoentgen method)	Perturbation quotient measures of Jitter using 11 cycles (Generilized Schoentgen method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058294.1_00100
PDE080058295.1	Perturbation quotient measures of Jitter using 11 cycles (Schoentgen method)	Perturbation quotient measures of Jitter using 11 cycles (Schoentgen method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058295.1_00100
PDE080058296.1	Perturbation quotient measures of Jitter using 3 cycles (Baken method)	Perturbation quotient measures of Jitter using 3 cycles (Baken method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058296.1_00100
PDE080058297.1	Perturbation quotient measures of Jitter using 3 cycles (Generilized Schoentgen method)	Perturbation quotient measures of Jitter using 3 cycles (Generilized Schoentgen method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058297.1_00100
PDE080058298.1	Perturbation quotient measures of Jitter using 3 cycles (Schoentgen method)	Perturbation quotient measures of Jitter using 3 cycles (Schoentgen method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058298.1_00100
PDE080058299.1	Perturbation quotient measures of Jitter using 5 cycles (Baken method)	Perturbation quotient measures of Jitter using 5 cycles (Baken method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058299.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058300.1	Perturbation quotient measures of Jitter using 5 cycles (Generilized Schoentgen method)	Perturbation quotient measures of Jitter using 5 cycles (Generilized Schoentgen method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058300.1_00100
PDE080058301.1	Perturbation quotient measures of Jitter using 5 cycles (Schoentgen method)	Perturbation quotient measures of Jitter using 5 cycles (Schoentgen method). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058301.1_00100
PDE080058302.1	Perturbation quotient measures of Shimmer using 11 cycles (Baken method)	Perturbation quotient measures of Shimmer using 11 cycles (Baken method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058302.1_00100
PDE080058303.1	Perturbation quotient measures of Shimmer using 11 cycles (Generilized Schoentgen method)	Perturbation quotient measures of Shimmer using 11 cycles (Generilized Schoentgen method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058303.1_00100
PDE080058304.1	Perturbation quotient measures of Shimmer using 11 cycles (Schoentgen method)	Perturbation quotient measures of Shimmer using 11 cycles (Schoentgen method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058304.1_00100
PDE080058305.1	Perturbation quotient measures of Shimmer using 3 cycles (Baken method)	Perturbation quotient measures of Shimmer using 3 cycles (Baken method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058305.1_00100
PDE080058306.1	Perturbation quotient measures of Shimmer using 3 cycles (Generilized Schoentgen method)	Perturbation quotient measures of Shimmer using 3 cycles (Generilized Schoentgen method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058306.1_00100
PDE080058307.1	Perturbation quotient measures of Shimmer using 3 cycles (Schoentgen method)	Perturbation quotient measures of Shimmer using 3 cycles (Schoentgen method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058307.1_00100
PDE080058308.1	Perturbation quotient measures of Shimmer using 5 cycles (Baken method)	Perturbation quotient measures of Shimmer using 5 cycles (Baken method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058308.1_00100
PDE080058309.1	Perturbation quotient measures of Shimmer using 5 cycles (Generilized Schoentgen method)	Perturbation quotient measures of Shimmer using 5 cycles (Generilized Schoentgen method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058309.1_00100
PDE080058310.1	Perturbation quotient measures of Shimmer using 5 cycles (Schoentgen method)	Perturbation quotient measures of Shimmer using 5 cycles (Schoentgen method). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058310.1_00100
PDE080058311.1	Recurrence Period Density Entropy	Recurrence Period Density Entropy	N	PDV080058311.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058312.1	Std of 0th coefficient of MFCC	Std of 0th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at each frequency band. The 0th MFCC coefficient represents the signal energy.	N	PDV080058312.1_00100
PDE080058313.1	Std of 0th delta coefficient of MFCC	Std of 0th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at each frequency band. The 0th MFCC coefficient represents the signal energy.	N	PDV080058313.1_00100
PDE080058314.1	Std of 0th delta-delta coefficient of MFCC	Std of 0th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at each frequency band. The 0th MFCC coefficient represents the signal	N	PDV080058314.1_00100
PDE080058315.1	Std of 10th coefficient of MFCC	Std of 10th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058315.1_00100
PDE080058316.1	Std of 10th delta coefficient of MFCC	Std of 10th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058316.1_00100
PDE080058317.1	Std of 10th delta-delta coefficient of MFCC	Std of 10th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058317.1_00100
PDE080058318.1	Std of 11th coefficient of MFCC	Std of 11th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058318.1_00100
PDE080058319.1	Std of 11th delta coefficient of MFCC	Std of 11th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058319.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058320.1	Std of 11th delta-delta coefficient of MFCC	Std of 11th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058320.1_00100
PDE080058321.1	Std of 12th coefficient of MFCC	Std of 12th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058321.1_00100
PDE080058322.1	Std of 12th delta coefficient of MFCC	Std of 12th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058322.1_00100
PDE080058323.1	Std of 12th delta-delta coefficient of MFCC	Std of 12th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058323.1_00100
PDE080058324.1	Std of 1st coefficient of MFCC	Std of 1st coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058324.1_00100
PDE080058325.1	Std of 1st delta coefficient of MFCC	Std of 1st delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058325.1_00100
PDE080058326.1	Std of 1st delta-delta coefficient of MFCC	Std of 1st delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058326.1_00100
PDE080058327.1	Std of 2nd coefficient of MFCC	Std of 2nd coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058327.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058328.1	Std of 2nd delta coefficient of MFCC	Std of 2nd delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058328.1_00100
PDE080058329.1	Std of 2nd delta-delta coefficient of MFCC	Std of 2nd delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058329.1_00100
PDE080058330.1	Std of 3rd coefficient of MFCC	Std of 3rd coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058330.1_00100
PDE080058331.1	Std of 3rd delta coefficient of MFCC	Std of 3rd delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058331.1_00100
PDE080058332.1	Std of 3rd delta-delta coefficient of MFCC	Std of 3rd delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058332.1_00100
PDE080058333.1	Std of 4th coefficient of MFCC	Std of 4th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058333.1_00100
PDE080058334.1	Std of 4th delta coefficient of MFCC	Std of 4th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058334.1_00100
PDE080058335.1	Std of 4th delta-delta coefficient of MFCC	Std of 4th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058335.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058336.1	Std of 5th coefficient of MFCC	Std of 5th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058336.1_00100
PDE080058337.1	Std of 5th delta coefficient of MFCC	Std of 5th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058337.1_00100
PDE080058338.1	Std of 5th delta-delta coefficient of MFCC	Std of 5th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058338.1_00100
PDE080058339.1	Std of 6th coefficient of MFCC	Std of 6th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058339.1_00100
PDE080058340.1	Std of 6th delta coefficient of MFCC	Std of 6th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058340.1_00100
PDE080058341.1	Std of 6th delta-delta coefficient of MFCC	Std of 6th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058341.1_00100
PDE080058342.1	Std of 7th coefficient of MFCC	Std of 7th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058342.1_00100
PDE080058343.1	Std of 7th delta coefficient of MFCC	Std of 7th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058343.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058344.1	Std of 7th delta-delta coefficient of MFCC	Std of 7th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058344.1_00100
PDE080058345.1	Std of 8th coefficient of MFCC	Std of 8th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058345.1_00100
PDE080058346.1	Std of 8th delta coefficient of MFCC	Std of 8th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058346.1_00100
PDE080058347.1	Std of 8th delta-delta coefficient of MFCC	Std of 8th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058347.1_00100
PDE080058348.1	Std of 9th coefficient of MFCC	Std of 9th coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058348.1_00100
PDE080058349.1	Std of 9th delta coefficient of MFCC	Std of 9th delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech signal at	N	PDV080058349.1_00100
PDE080058350.1	Std of 9th delta-delta coefficient of MFCC	Std of 9th delta-delta coefficient of MFCC. The Mel frequency scale in combination with cepstral analysis gives rise to Mel-Frequency Cepstral Coefficients (MFCCs), which are the reference standard feature for speaker identification and automatic speech recognition. MFCCs compute the contribution of the energy of the speech	N	PDV080058350.1_00100
PDE080058351.1	Std of delta log signal energy	Std of delta log signal energy	N	PDV080058351.1_00100
PDE080058352.1	Std of delta-delta log signal energy	Std of delta-delta log signal energy	N	PDV080058352.1_00100
PDE080058353.1	Std of glottal to noise excitation ratio	Std of glottal to noise excitation ratio. The Glottal-to-Noise Excitation Ratio (GNE) belongs to a family of measures that aim to quantify the extent of noise in the signal (they can be viewed as SNR-like measures).	N	PDV080058353.1_00100
PDE080058354.1	Std of Harmonics to Noise Ratio	Std of Harmonics to Noise Ratio. HNR quantify the ratio of actual signal information over noise.	N	PDV080058354.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058355.1	Std of Jitter using Teager-Kaiser energy operator (TKEO)	Std of Jitter using Teager-Kaiser energy operator (TKEO). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058355.1_00100
PDE080058356.1	Std of log signal energy	Std of log signal energy	N	PDV080058356.1_00100
PDE080058357.1	Std of Noise to Harmonics Ratio	Std of Noise to Harmonics Ratio. NHR quantify the ratio of actual signal information over noise.	N	PDV080058357.1_00100
PDE080058358.1	Std of Shimmer using Teager-Kaiser energy operator (TKEO)	Std of Shimmer using Teager-Kaiser energy operator (TKEO). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058358.1_00100
PDE080058359.1	Std of the 1st formant	Std of the 1st formant	N	PDV080058359.1_00100
PDE080058360.1	Std of the 2nd formant	Std of the 2nd formant	N	PDV080058360.1_00100
PDE080058361.1	Std of the 3rd formant	Std of the 3rd formant	N	PDV080058361.1_00100
PDE080058362.1	Std of vocal fold excitation ratios (VFER)	Std of vocal fold excitation ratios (VFER). The Vocal Fold Excitation Ratios (VFER) are another family of dysphonia measures with similar conceptual justification to GNE: glottal cycles lead to synchronous excitation of different frequency bands and turbulent noise leads to uncorrelated excitation.	N	PDV080058362.1_00100
PDE080058363.1	Std values of glottis quotients in closed	Std values of glottis quotients in closed cycle	N	PDV080058363.1_00100
PDE080058364.1	Std values of glottis quotients in open	Std values of glottis quotients in open cycle	N	PDV080058364.1_00100
PDE080058365.1	The difference between 5% and 95% values of glottis quotients	The difference between 5% and 95% values of glottis quotients	N	PDV080058365.1_00100
PDE080058366.1	The difference between 5% and 95% values of Jitter using Teager-Kaiser energy operator (TKEO)	The difference between 5% and 95% values of Jitter using Teager-Kaiser energy operator (TKEO). Jitter aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in fundamental frequency.	N	PDV080058366.1_00100
PDE080058367.1	The difference between 5% and 95% values of Shimmer using Teager-Kaiser energy operator (TKEO)	The difference between 5% and 95% values of Shimmer using Teager-Kaiser energy operator (TKEO). Shimmer aims to capture instabilities of the oscillating pattern of the vocal folds quantifying the cycle-to-cycle changes in amplitude.	N	PDV080058367.1_00100
PDE080058368.1	Vocal fold excitation ratio (VFER) using noise-signal ratio (NSR) and signal energy operator (SEO)	Vocal fold excitation ratio (VFER) using noise-signal ratio (NSR) and signal energy operator (SEO). The Vocal Fold Excitation Ratios (VFER) are another family of dysphonia measures with similar conceptual justification to GNE: glottal cycles lead to synchronous excitation of different frequency bands and turbulent noise leads to	N	PDV080058368.1_00100
PDE080058369.1	Vocal fold excitation ratio (VFER) using noise-signal ratio (NSR) and Teager-Kaiser energy operator (TKEO)	Vocal fold excitation ratio (VFER) using noise-signal ratio (NSR) and Teager-Kaiser energy operator (TKEO). The Vocal Fold Excitation Ratios (VFER) are another family of dysphonia measures with similar conceptual justification to GNE: glottal cycles lead to synchronous excitation of different frequency bands and turbulent noise leads to uncorrelated excitation.	N	PDV080058369.1_00100

ID	Term	Description	Type	Variable IDs
PDE080058370.1	Vocal fold excitation ratio (VFER) using signal-noise ratio (SNR) and signal energy operator (SEO)	Vocal fold excitation ratio (VFER) using signal-noise ratio (SNR) and signal energy operator (SEO). The Vocal Fold Excitation Ratios (VFER) are another family of dysphonia measures with similar conceptual justification to GNE: glottal cycles lead to synchronous excitation of different frequency bands and turbulent noise leads to	N	PDV080058370.1_00100
PDE080058371.1	Vocal fold excitation ratio (VFER) using signal-noise ratio (SNR) and Teager-Kaiser energy operator (TKEO)	Vocal fold excitation ratio (VFER) using signal-noise ratio (SNR) and Teager-Kaiser energy operator (TKEO). The Vocal Fold Excitation Ratios (VFER) are another family of dysphonia measures with similar conceptual justification to GNE: glottal cycles lead to synchronous excitation of different frequency bands and turbulent noise leads to uncorrelated excitation.
